EDUCATION

Michigan State University

Bachelor of Science in Computer Science

East Lansing, MI

Expected May 2027

- GPA: 3.71
- Relevant Coursework: Linear Algebra, Discrete Mathematics, Computer Organization and Architecture, Data Structures and Algorithms, Computer Systems, Object-Oriented Software Design, Information Management and the Cloud

EXPERIENCE

Freelance Full-Stack Developer

September 2025 – Present

Client Project (OpenVerse)

East Lansing, MI

- Developed a full-stack marketplace connecting independent artists with buyers, featuring artist profiles, product listings, and integrated payment processing.
- Built with React for a responsive, scalable frontend and Python FastAPI backend, delivering high-performance API responses and seamless user experience. Also designed and documented 15+ RESTful API endpoints for authentication, user management, and Stripe payment integration, enabling seamless frontend-backend communication.
- Architected Supabase PostgreSQL database with Row Level Security (RLS) to enforce secure, role-based access control for user authentication and data management.
- Containerized the full-stack application using Docker to streamline local development and simplify deployment workflows.

Technology and Transformation Intern

May 2025 – Aug 2025

Deloitte

Mumbai, Maharashtra

- Developed a client-facing presentation for a pharmacy company analyzing the feasibility of AI integration in their educational systems, delivering data-driven recommendations to support adoption decisions.
- Analyzed 10+ Excel datasets containing server usage metrics, cost data, virtual machine utilization, and legacy system records across multiple global locations to produce a comprehensive infrastructure assessment report.
- Synthesized server health logs, usage trends, and cost data into a 50+ slide infrastructure report, providing actionable recommendations on server consolidation, VM optimization, and legacy system migration to reduce operational risk.

PROJECTS

IntelliPay | *React (TypeScript), Python, FastAPI, PostgreSQL*

October 2025 – Present

- Built a centralized LLM billing dashboard using React (TypeScript) and Python FastAPI, consolidating API usage across providers (OpenAI, Anthropic, etc.) with real-time cost tracking and detailed transaction logs.
- Engineered performant APIs with response times under 300ms for standard operations and sub-second analytics queries through optimized PostgreSQL indexing.
- Integrated Stripe payment processing with webhooks for subscription and usage-based billing; containerized with Docker and deployed via CI/CD pipeline using GitHub Actions.

Flight Path Optimization | *MSU Unmanned Systems | Python, C++*

September 2025 – Present

- Designed and implemented a path finding algorithm using Simulated Annealing to generate optimized flight paths, reducing redundant coverage by 15% while ensuring complete field traversal.
- Integrated battery monitoring and return-to-base logic with real-time state management, enabling autonomous navigation and preventing mid-flight battery depletion.
- Simulated and tested flight paths across various field geometries, achieving approximately 15% reduction in flight time compared to baseline algorithms.

TECHNICAL SKILLS

Languages: Python, C/C++, JavaScript/TypeScript, HTML/CSS, Bash

Frameworks & Libraries: React, Vite, Node.js, Next.js, FastAPI, Tailwind CSS

Databases: Supabase, MongoDB, PostgreSQL, SQLite

Tools & Platforms: Docker, Git, CI/CD Pipelines, Postman, GitHub Actions

Certifications: AWS Certified Cloud Practitioner
